The installer version of the 2014 product checks for the older version on the same machine and will not install it, or install it and notify you to remove the version. Then, on the same machine, it will make a backup copy of the 2013 to the same location as the older version. This installation will not stop the 2013 version from running. Once the 2013 version has completed, 2014 will ask if the 2013 version was clean and will ask if there is an older version. It will then allow you to install a clean 2014 on the same machine or run a clean 2013 version on the same machine. Removing 2013 ========== In the event you are having problems with the 2013 version or want to remove it entirely, the following methods have been found useful: 82157476af
